

B.Sc Biotechnology Course Outcomes:

After successful completion of bachelors of Science in Biotechnology, the students will be able

- To demonstrate basic knowledge in biological sciences.
- To acquire knowledge of engineering skills to design and conduct experiments, analyze data and interpret results.
- To demonstrate understanding the knowledge in modern biology disciplines.
- To demonstrate the modern engineering techniques used in biotechnology and apply technological solutions in various fields of modern biotechnological applications.
- To reinforce high end recent advances in biotechnology.
- To communicate effectively and demonstrate professional and ethical responsibilities.
- To acquire first-hand experience in working on projects at individual level and exposure to industrial and research fields.
